Date: _____
Company Name: _____
Order Number: _____
Cabinet Width: _____
Cabinet Height: _____

Phone Number: _____
Contact Name: _____
Job Required By: _____
Masking Panel Width: _____
Masking Panel Height: _____

MASKING PANEL MEASUREMENTS

1 - Give measurements of the outside dimensions (mm) of the masking panel (for GAEL boards this can be the measurement of the cabinet) and mark them on the template. If possible, the size of the cabinet as well.

2 - Roughly sketch the equipment that will protrude through the masking panel inside the template.

3 - For anything other than the standard DIN type circuit breakers, measure and mark the size of the cutouts needed for them. For standard MCBs and switches, just indicate how many there are in each row.

4 - Measure from the top and left hand sides to the top and left hand sides of every piece of equipment giving a vertical and horizontal measurement.

5 - Measure and mark any other cutouts needed such as hinges and latches.

6 - Any additional notes, photos, brand names of equipment and information will help ensure your masking panel fits the first time.

Example:
